

Sub- CL-III	Practical Examination Set A	Marks: 50
Design a distributed application using RPC for remote computation where client submits an integer value to the server and server calculates factorial and returns the result to the client program.		
Sub- CL-III	Practical Examination Set B	Marks: 50
Design a distributed application using RMI for remote computation where client submits two strings to the server and server returns the concatenation of the given strings.		
Sub- CL-III	Practical Examination Set C	Marks: 50
Implement Union, Intersection, Complement and Difference operations on fuzzy sets. Also create fuzzy relations by Cartesian product of any two fuzzy sets and perform max-min composition on any two fuzzy relations.		
Sub- CL-III	Practical Examination Set D	Marks: 50
Write code to simulate requests coming from clients and distribute them among the servers using the load balancing algorithms.		
Sub- CL-III	Practical Examination Set E	Marks: 50
Optimization of genetic algorithm parameter in hybrid genetic algorithm-neural network modelling: Application to spray drying of coconut milk.		
Sub- CL-III	Practical Examination Set F	Marks: 50
Implementation of Clonal selection algorithm using Python.		
Sub- CL-III	Practical Examination Set G	Marks: 50
To apply the artificial immune pattern recognition to perform a task of structure damage Classification.		
Sub- CL-III	Practical Examination Set H	Marks: 50
Implement DEAP (Distributed Evolutionary Algorithms) using Python.		
Sub- CL-III	Practical Examination Set I	Marks: 50
Implement Ant colony optimization by solving the Traveling salesman problem using python Problem statement- A salesman needs to visit a set of cities exactly once and return to the original city. The task is to find the shortest possible route that the salesman can take to visit all the cities and return to the starting city.		
Sub- CL-III	Practical Examination Set J	Marks: 50
Create and Art with Neural style transfer on given image using deep learning.
